To whom it may concern

**RE: ESTABLISHMENT OF A CEMETERY ON PORTIONS 103 & 104 OF FARM GROOT
VALLEY NO 451**

Confirmation of capacity

Water reticulation:

It is anticipated that the proposed cemetery will generate an annual average daily demand of 2000 litres. Due to there being no municipal water reticulation services in close proximity to the site, a 10 000 litre storage tank will be provided on site in order to supply the cemetery with domestic water.

The municipal water truck will be utilised to fill the storage tank as required.

Sewer reticulation:

The cemetery is situated north of the existing Waste Water Treatment Works. It is proposed that a link service is constructed up to the inlet of the WWTW.

The waste water treatment works was recently upgraded and there is adequate capacity available to accommodate the proposed cemetery development.

Please do not hesitate to contact the undersigned should you require any additional information.

Yours sincerely,

**Mr A Titus
Acting Municipal Manager**
